DETAILED ACTION

Claim Rejections 35 U.S.C. 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Waters et al. (USPN 6256046) in view of Delph (USPN 6286029).

Regarding claims 1-6, Waters teaches a Kiosk (50) including a memory/processor (120), a display screen (105) and the activity detection module (125), which detects the presence and movement of users in interaction spaces (75, 80). Waters teaches the use of cameras (60, 65,70) allowing the kiosk (50) to detect the presence of the users fifty feet from the kiosk environment. Waters the activity detection module (125) through the activity detection program, which determines whether there is a user, or not in the interaction space (75). See Fig 2, Fig 3, column 3, lines lines 3-52 and column 4, lines 19-41. However, Waters does not teach displaying information with respect to elapsed time until the actual use of a kiosk by a user. Delphi on the other hand teaches computer instructions about pause time, which is the period of time over which a kiosk computer (90) will display content data on the kiosk monitor screen (95). See col. 6, lines 14-19.

Therefore, it would have been obvious to one having a skill in the art at the time the invention was made to modify waters' Kiosk system to include Delph's use of computer

instructions about pause time. One would have been motivated in view of the suggestion in Delphi that the computer instructions about pause time can be used to establish the desired period for the purpose of displaying information within an interval of elapsed time. The use of pause time helps function a kiosk computer as taught by Delph.

Regarding claim 7, Waters teaches the use of cameras (60, 70) in the kiosk system. See Fig. 2.
